Performance Mechanical, Inc.'s expert installation, maintenance, and repair services help protect you from the risks of fractures, leaks, and corrosion that are inherent in facilities where liquids and gases are under pressure.

Our team of highly-skilled boilermakers and welders offer a wide range of specialty services for power plant heat recovery steam generators, boiler tubes, heater tubes, vats, vessels, and piping.

Certified Team of R Stamp and Power Piping Specialists

We know that you need your weld joints performed by specialists who have demonstrated their quality through rigorous testing. That's why our boilermakers are certified to perform R stamp welds and repairs, as specified by the National Board of Boiler and Pressure Vessel Inspectors and the American Society of Mechanical Engineers (ASME). In addition, we provide certified rigging services and can perform work on HRSG from simple tube repair to full blown rebuilds (HARP replacement).

We're also certified in pressure piping, so we can weld, fit, and install all the tubes and accessories attached to your boilers and vessels.

Proven Welding Expertise

For all grades of carbon steel, exotic metals, high- and low-temp alloys, and stainless steel, our certified boilermakers offer mastery in:

- ➔ Gas metal arc welding (GMAW)
- ➔ Gas tungsten arc welding (GTAW/TIG)
- ➔ Shielded metal arc welding (SMAW)

Anywhere throughout your plants and facilities that you need us to cut, gouge, attach, or mend—we're ready to solve all your welding challenges.
